

The background is a complex, abstract 3D visualization. It features a dense network of thin, dark lines forming a grid-like structure. Numerous small, glowing spheres in various colors (blue, orange, yellow, red) are scattered throughout the space, some appearing to be connected to the lines. The overall effect is that of a dynamic, interconnected system, possibly representing a network or data flow.

# **Videoinfrastruktur für den verteilten Congress des Chaos Computer Club**

**FKTG Seminar / Media Event Ilmenau, 23.02.2021**

**Alexander Votteler & Anton Schubert**

# Alexander Votteler

- active member of FeM e.V. since 2016
- Chaos Communication Congress Streaming since 2015
- doing freelance work in the video industry
- employed at a local Internet service provider in Aachen

# Anton Schubert

- graduation master MT at TU Ilmenau in 2018
- development engineer at Riedel Communications
- active member of FeM e.V. since 2014
- C3VOC streaming since 2014

# Forschungsgemeinschaft elektronische Medien

- student association at TU-Ilmenau
- providing Internet access for 2000 students in dormitories
- operation of iSTUFF - a student TV station
- recording of Chaos Communication Congress since 2005

# Chaos Computer Club

- CCC is Europe's largest association of hackers
- "galactic community of life forms"
- organized in local communities called "Erfas"

# Chaos Communication Congress

- congress with lectures and workshops surrounding technical, political and social issues
- 2019: 17.000 visitors at Messe Leipzig (36C3)
- organized by volunteers
- 2020: first time as virtual event (rC3)

# C3VOC - "CCC video operations center"

- working group of video enthusiasts in the CCC
- streaming, recording and publishing of lectures
- strong use of open source software and technologies

# Remote Chaos Experience (rC3)

- virtual event in place of the congress
- 27.12.2020 - 30.12.2020
- three main parts

# Remote Chaos Experience (rC3)

- virtual event in place of the congress
- 27.12.2020 - 30.12.2020
- three main parts
  - rC3 World - 2D online multiplayer game

# Remote Chaos Experience (rC3)

- virtual event in place of the congress
- 27.12.2020 - 30.12.2020
- three main parts
  - rC3 World - 2D online multiplayer game
  - online workshops via video conferences

# Remote Chaos Experience (rC3)

- virtual event in place of the congress
- 27.12.2020 - 30.12.2020
- three main parts
  - rC3 World - 2D online multiplayer game
  - online workshops via video conferences
  - **streaming of lectures**

# rC3 Streaming

- 25 studios
- 19 live broadcast channels
- over 350 talks and events

# rC3 Streaming Statistics

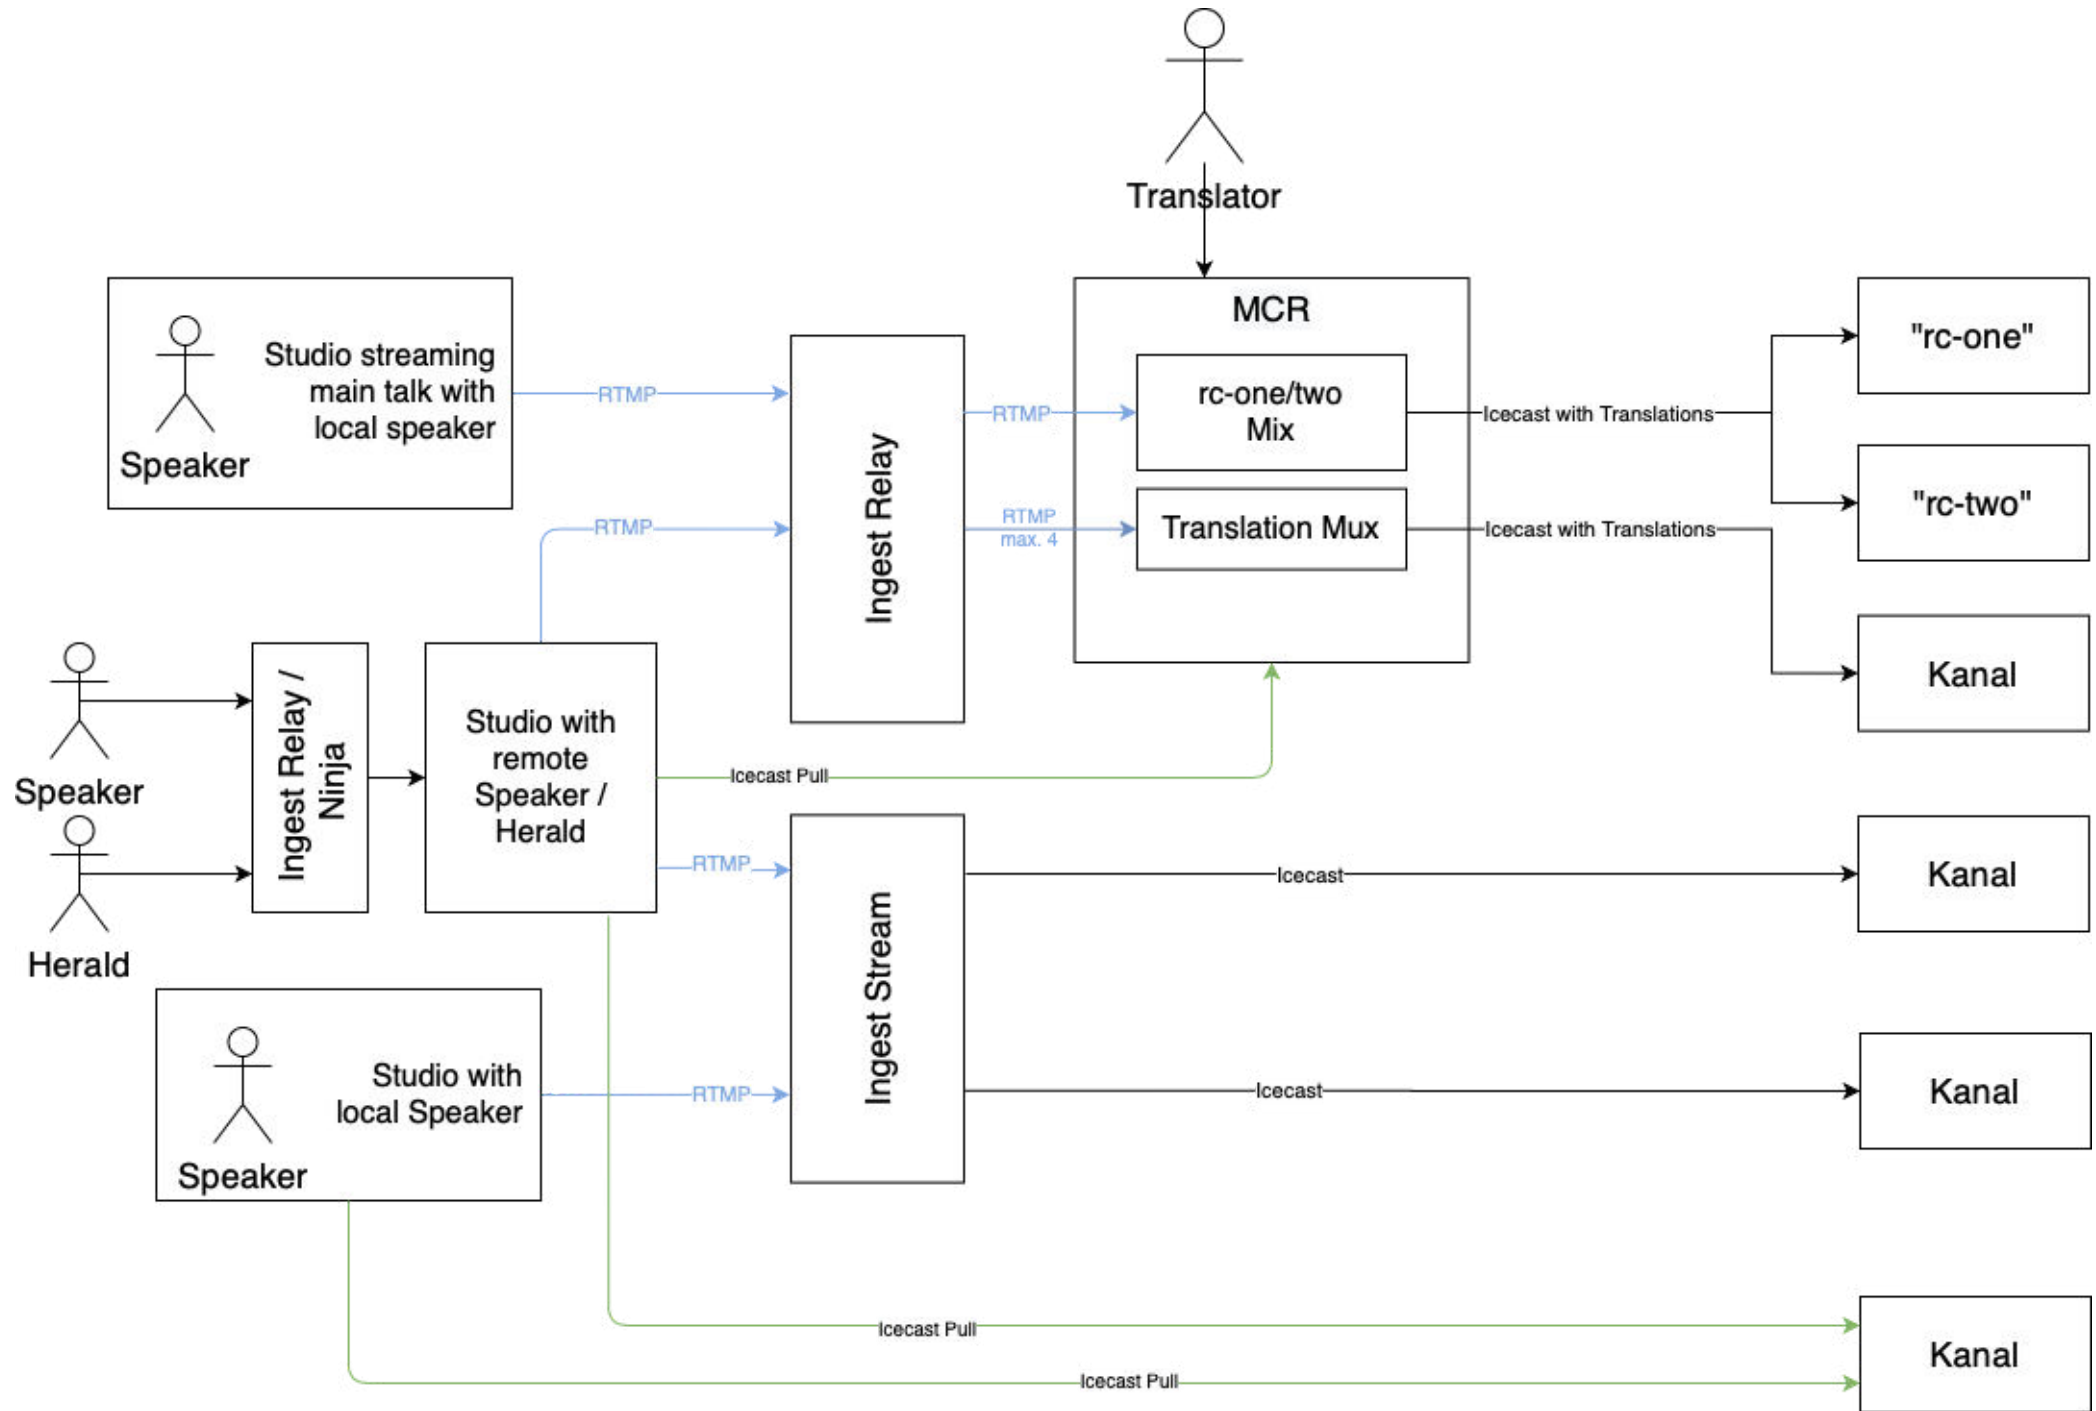

- over 9000 peak concurrent livestream viewers
- >25 Gigabit/s peak outgoing stream bandwidth
- about 95% of streams in adaptive formats

# rC3 streaming

## Community channels

- custom content and streaming schedules
- content produced by local CCC chapters
- streaming and releasing via C3VOCs own infrastructure
- diverse ways of producing video:
  - OBS
  - hardware mixers

# rC3 streaming

## Main channels

- curated content and continuous schedule
- production handled by 12 live studios
- mixing and recording by master control room in Ilmenau

# rC3 streaming

## Programming Schedule

- studio goes live
  - introduction by herald (announcer)
  - live/prerecorded presentation
  - Q/A session
- handover to next studio

# rC3 streaming

## Teams

- recording managers
- stream operators (MCR)
- studio crews
- herald crew
- signal angels
- translators
- VOC

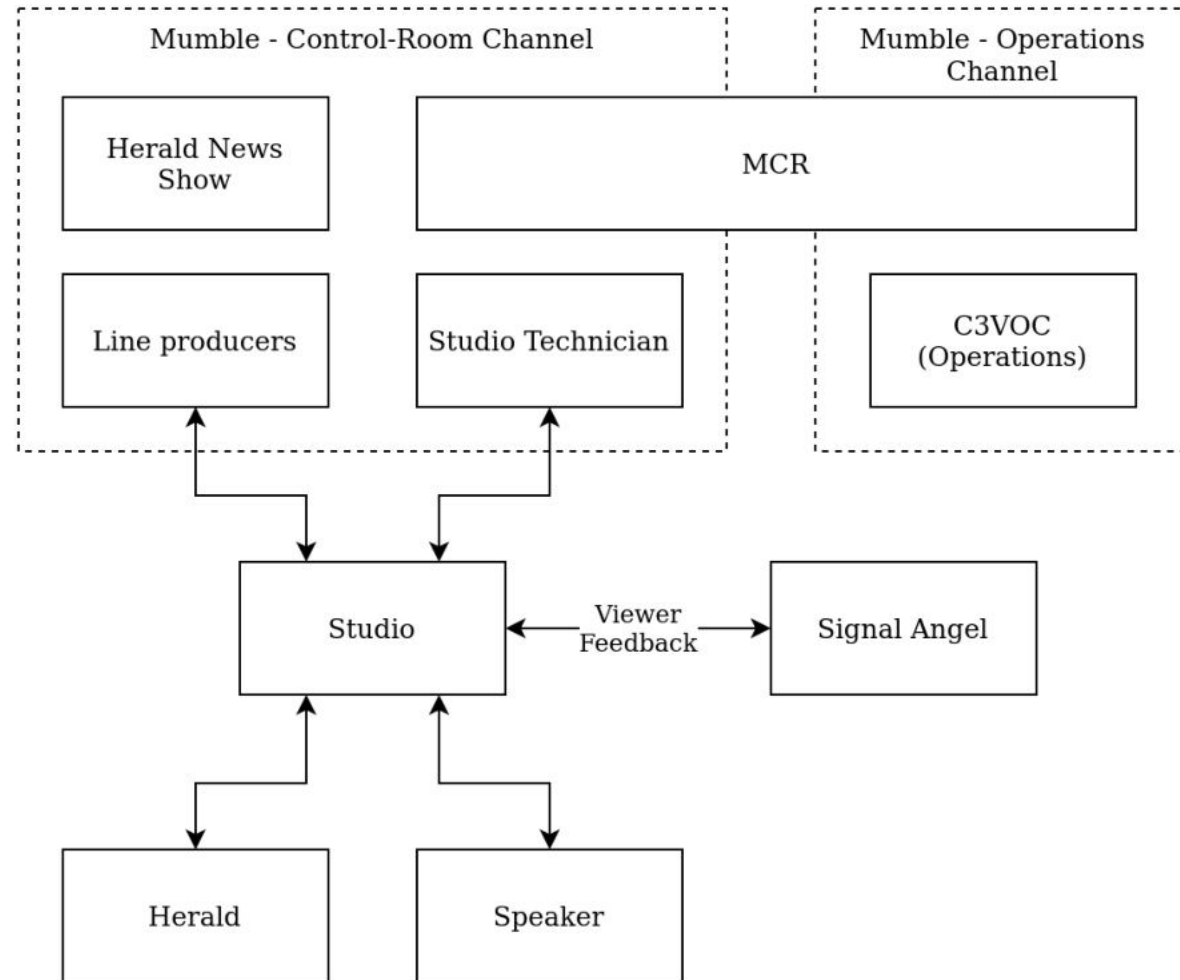

# rC3 streaming

## Communication channels

- voice communication via Mumble
- shared Kanban boards (Wekan) and ticket system
- file sharing for prerecorded talks

# rC3 streaming

## Communication channels

# rC3 streaming

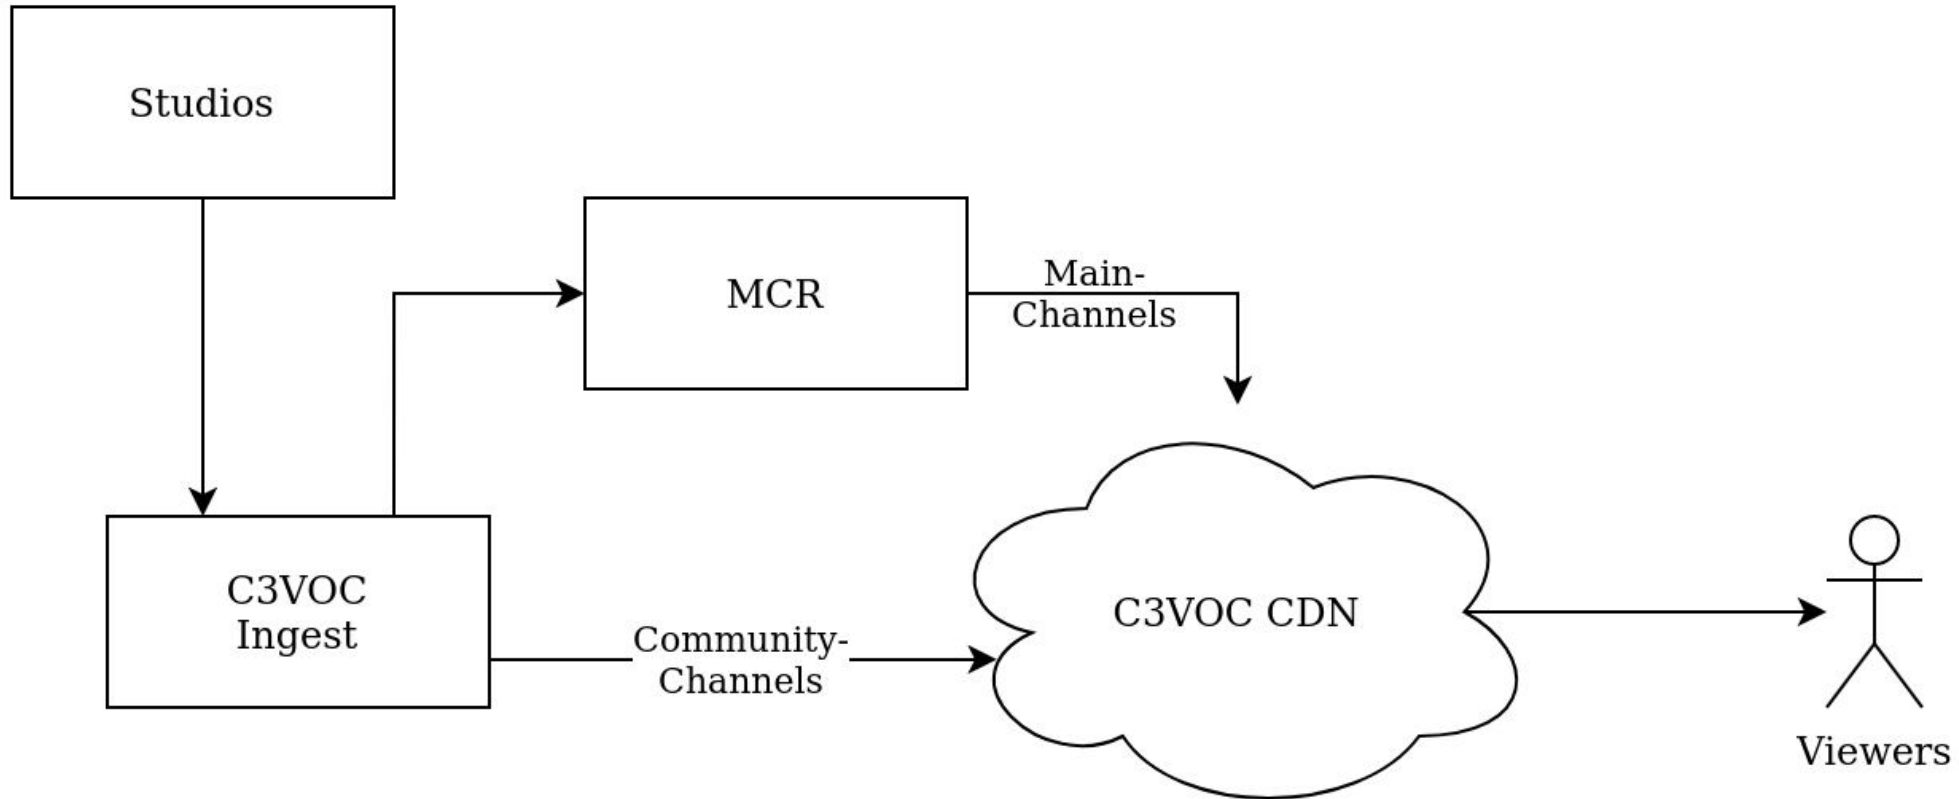

## Challenges

- missing live-video experience
- coordinating the chaos
- timing with varying video-delay

# Master Control Room

- mixing of the signal for the mains streams
- audio processing
- embedding of live translation

# MCR Overview

# Master Control Room Equipment

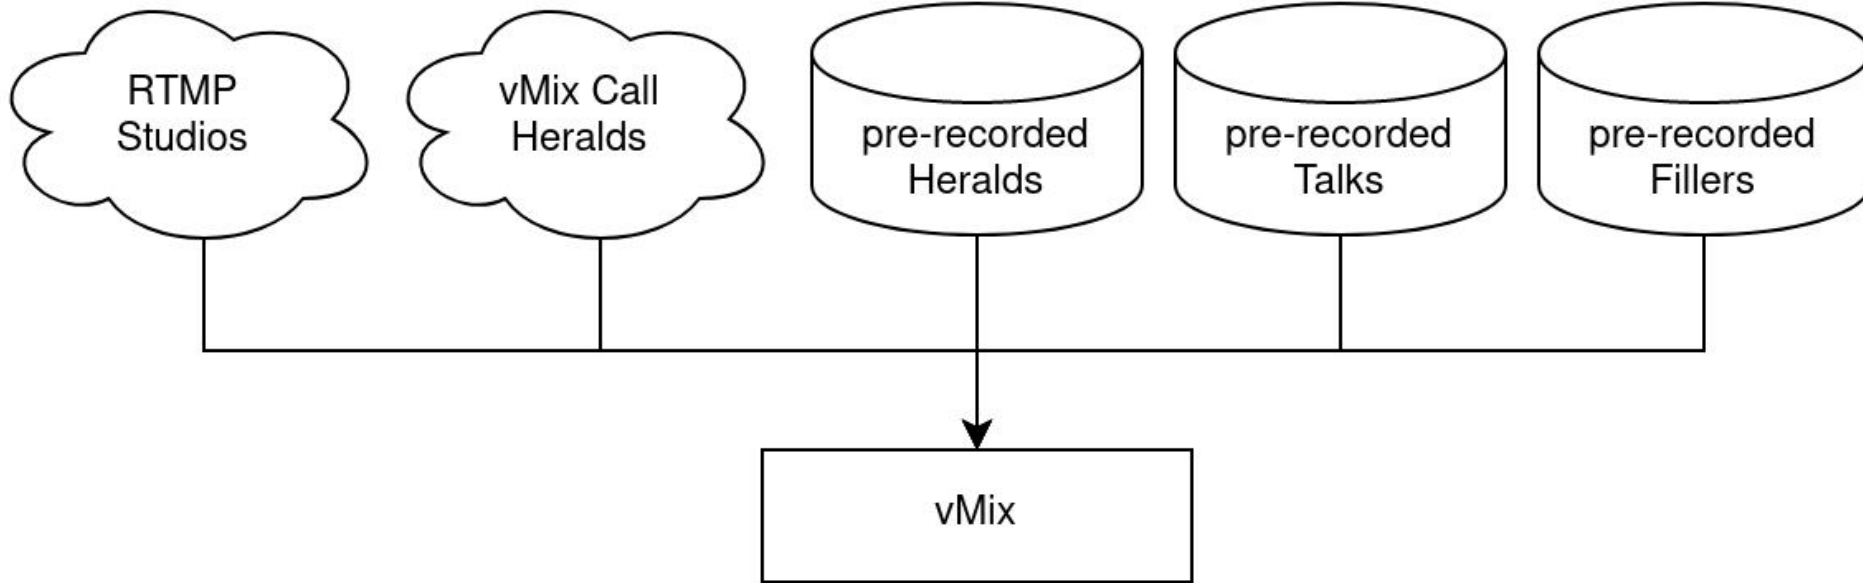

- vMix software video mixer
- Riedel MediorNet
- Lawo V\_\_matrix
- Allen & Heath dLive
- Linux machines with SDI and MADI I/O

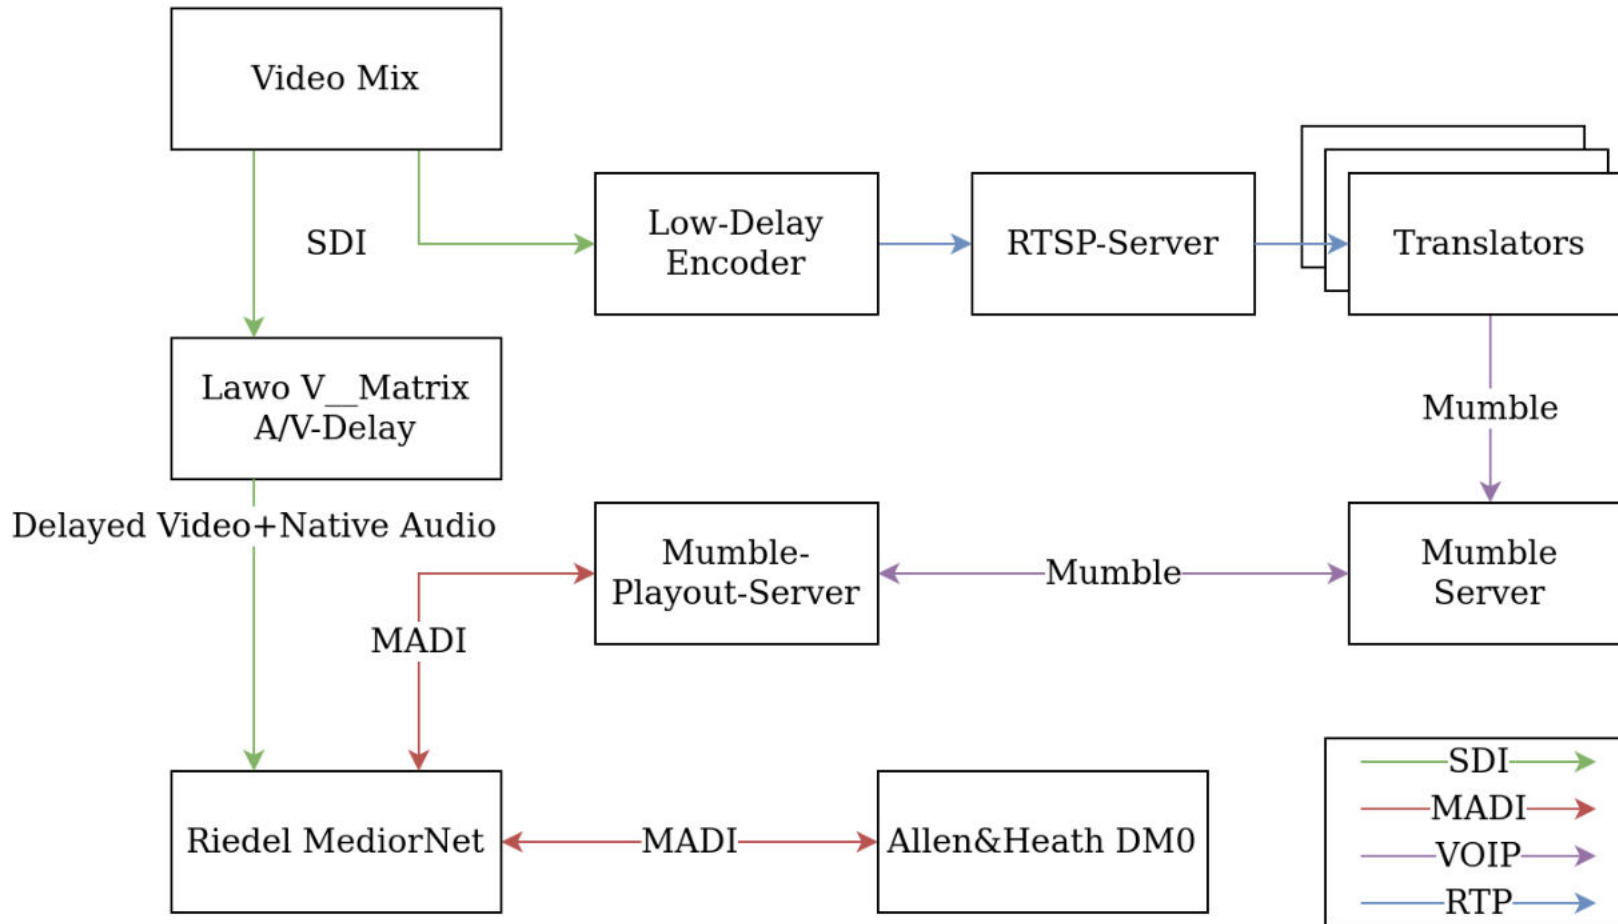

# Master Control Room

vMix

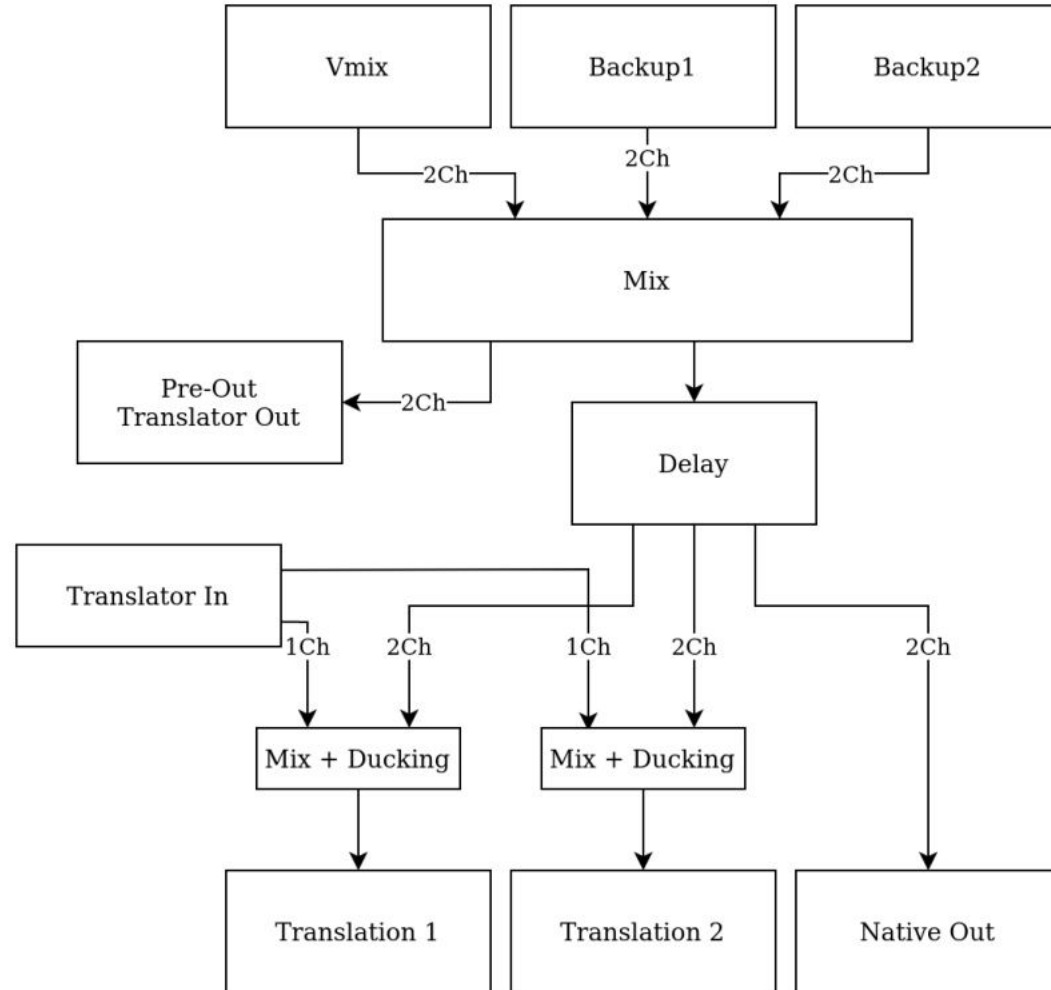

# Master Control Room

## Translator Ingest

# Master Control Room

## Audio

# Master Control Room

## Technical Challenges

- only a single day for building the setup
- SDI interoperability is also bad
- crappy hardware encoders and bad uplinks

A blurred background image of a server rack with various components and cables visible.

# **C3VOC Infrastructure**

## **Upgrades for rC3**

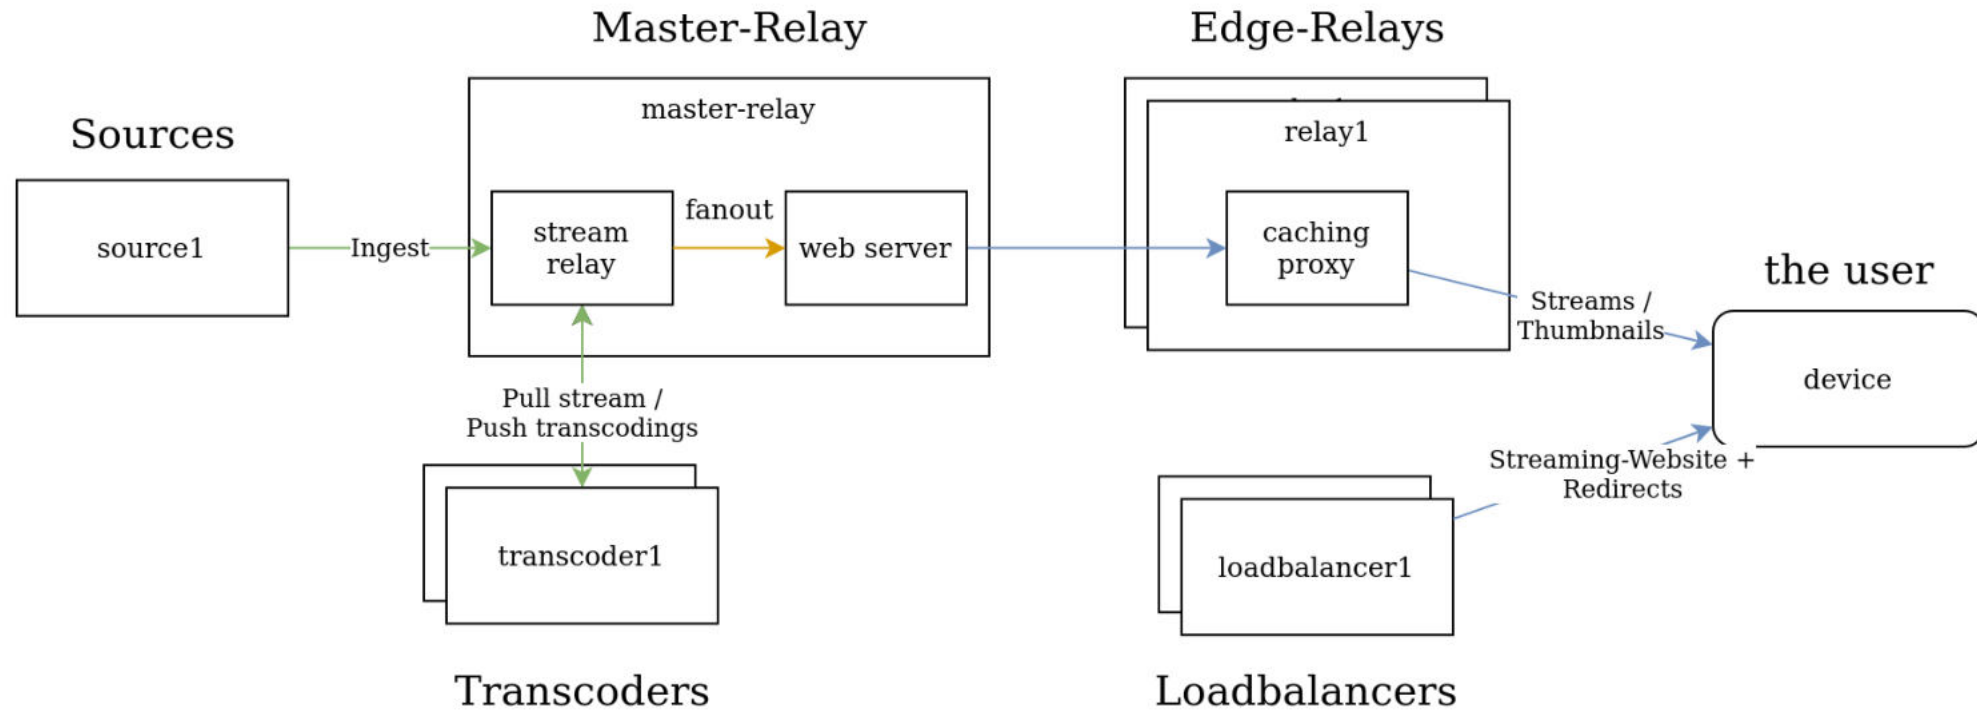

# C3VOC Infrastructure

## Challenges

- more viewers than before
- greater expectations for the streams
- more streams than before
- production not in hands of the C3VOC

# C3VOC Infrastructure

## Streaming CDN

# MUSIC LIVE

## Streaming Website

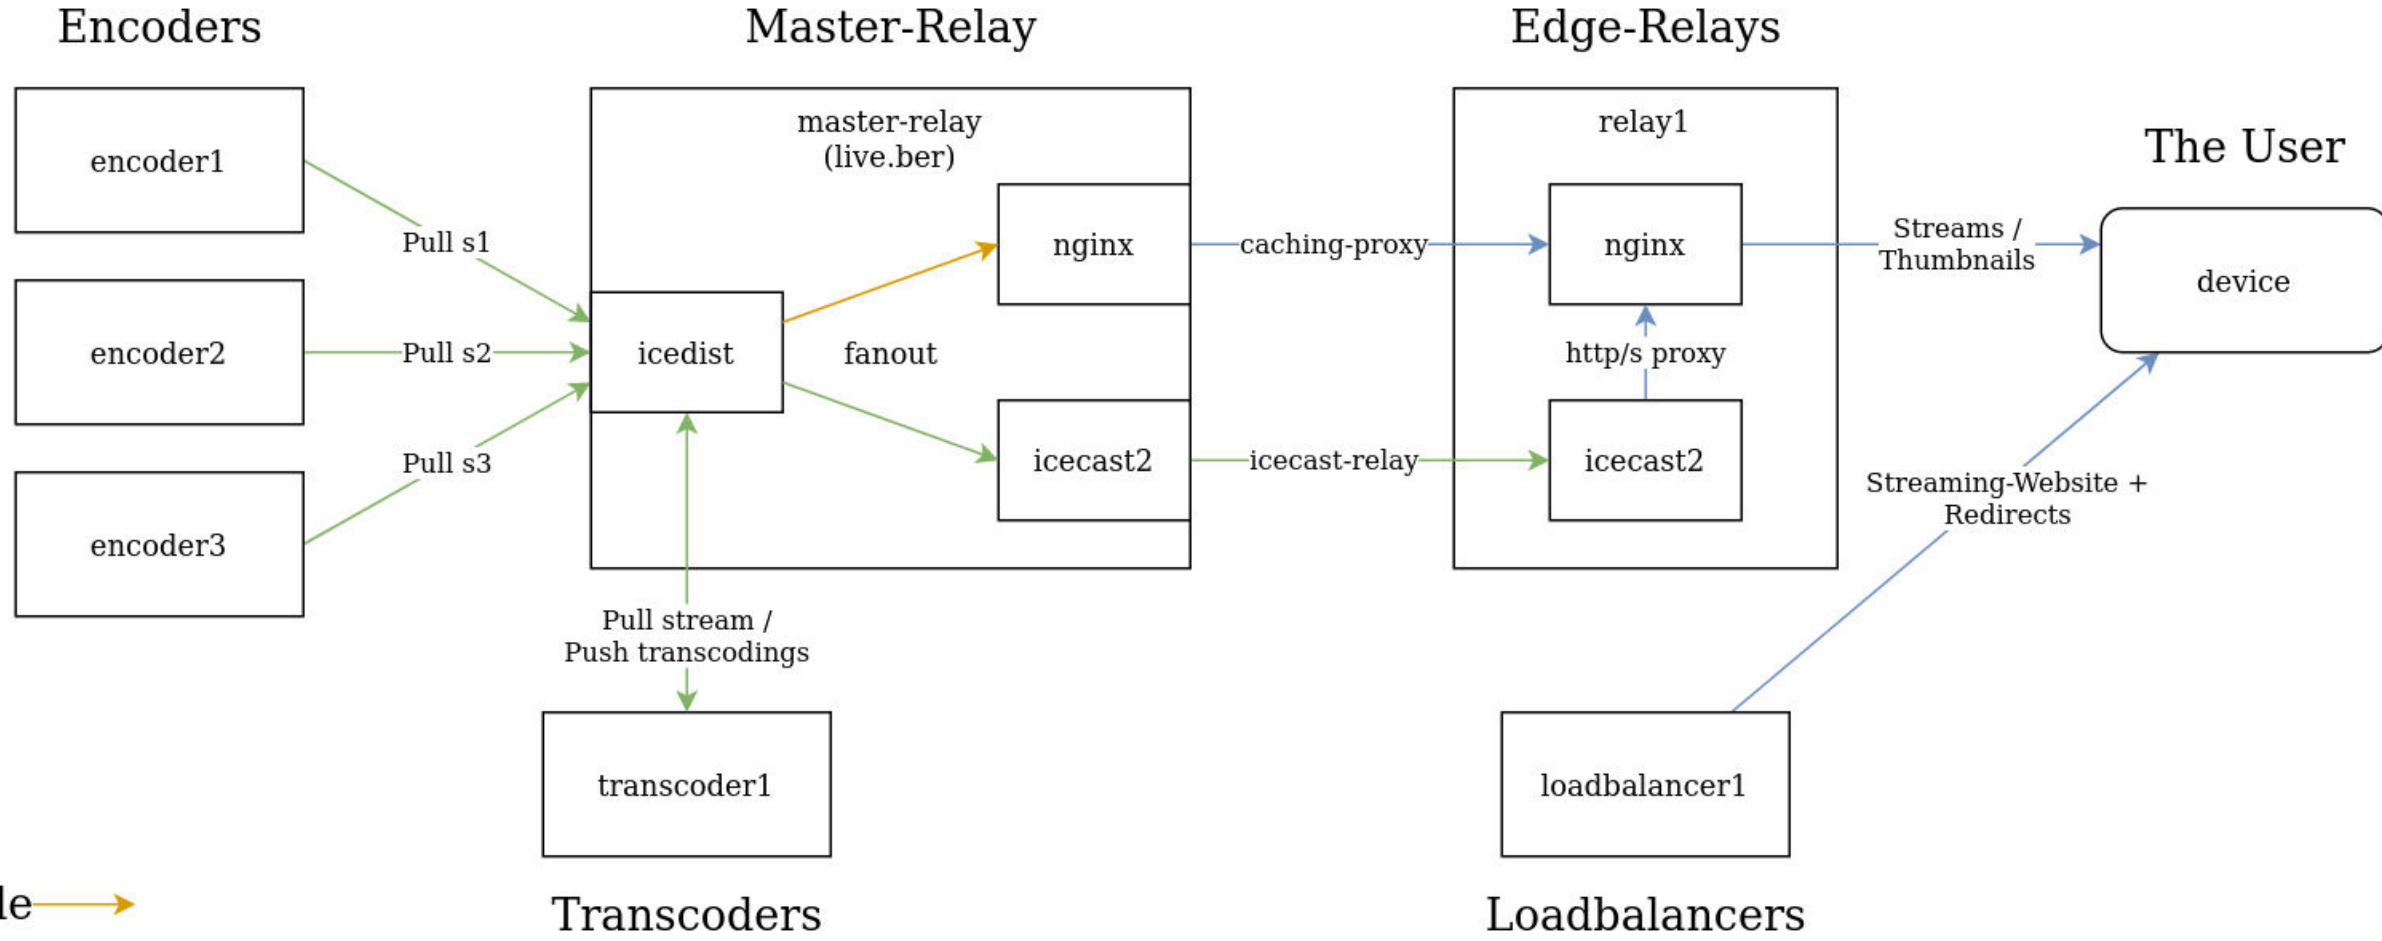

- dynamic Conference schedule
- custom web-player
- Adaptive quality switching
- Multi-Language support
- MPEG-DASH (webM-based) and HLS

# C3VOC Infrastructure

## Streaming CDN upgrades

- more load-balancers and edge relays
- 80 Gbit/s total CDN bandwidth in 7 locations
- more transcoders
- streaming-capacity was sufficient
- some ddos on day 2

# VOC - CDN

# C3VOC Infrastructure

## Achieving better Stability

- load-testing of CDN edge nodes
- load-testing of software transcoders

[github.com/voc/stream-tools](https://github.com/voc/stream-tools)

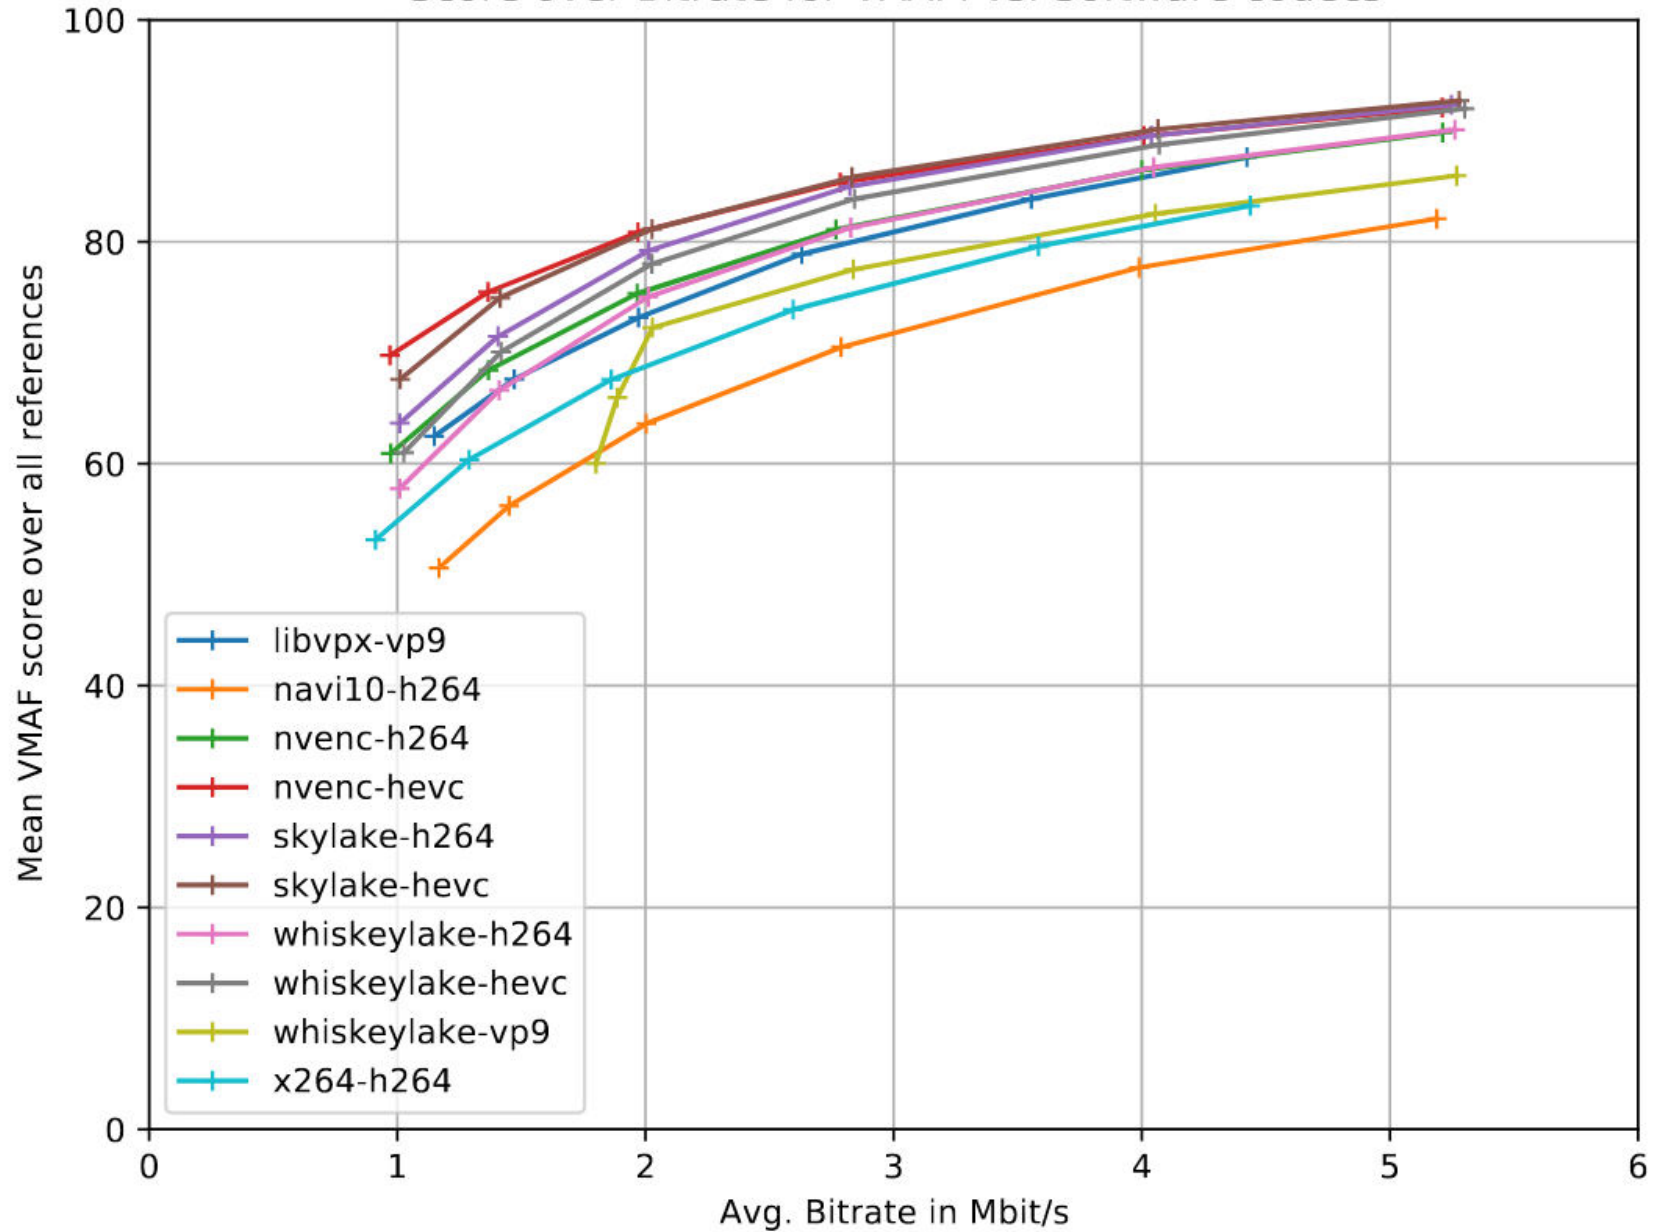

# C3VOC Infrastructure

## Encoding h.264 on GPUs

- 2019 first tests with h.264 encoding on Intel GPUs
- 2020 quality comparisons using Netflix VMAF
- Intel h.264 GPU encoding beats x264 for realtime
- using our full hardware: h.264 on GPU, VP9 on CPU

[github.com/voc/voctoquality](https://github.com/voc/voctoquality)

Score over Bitrate for VAAPI vs. Software codecs

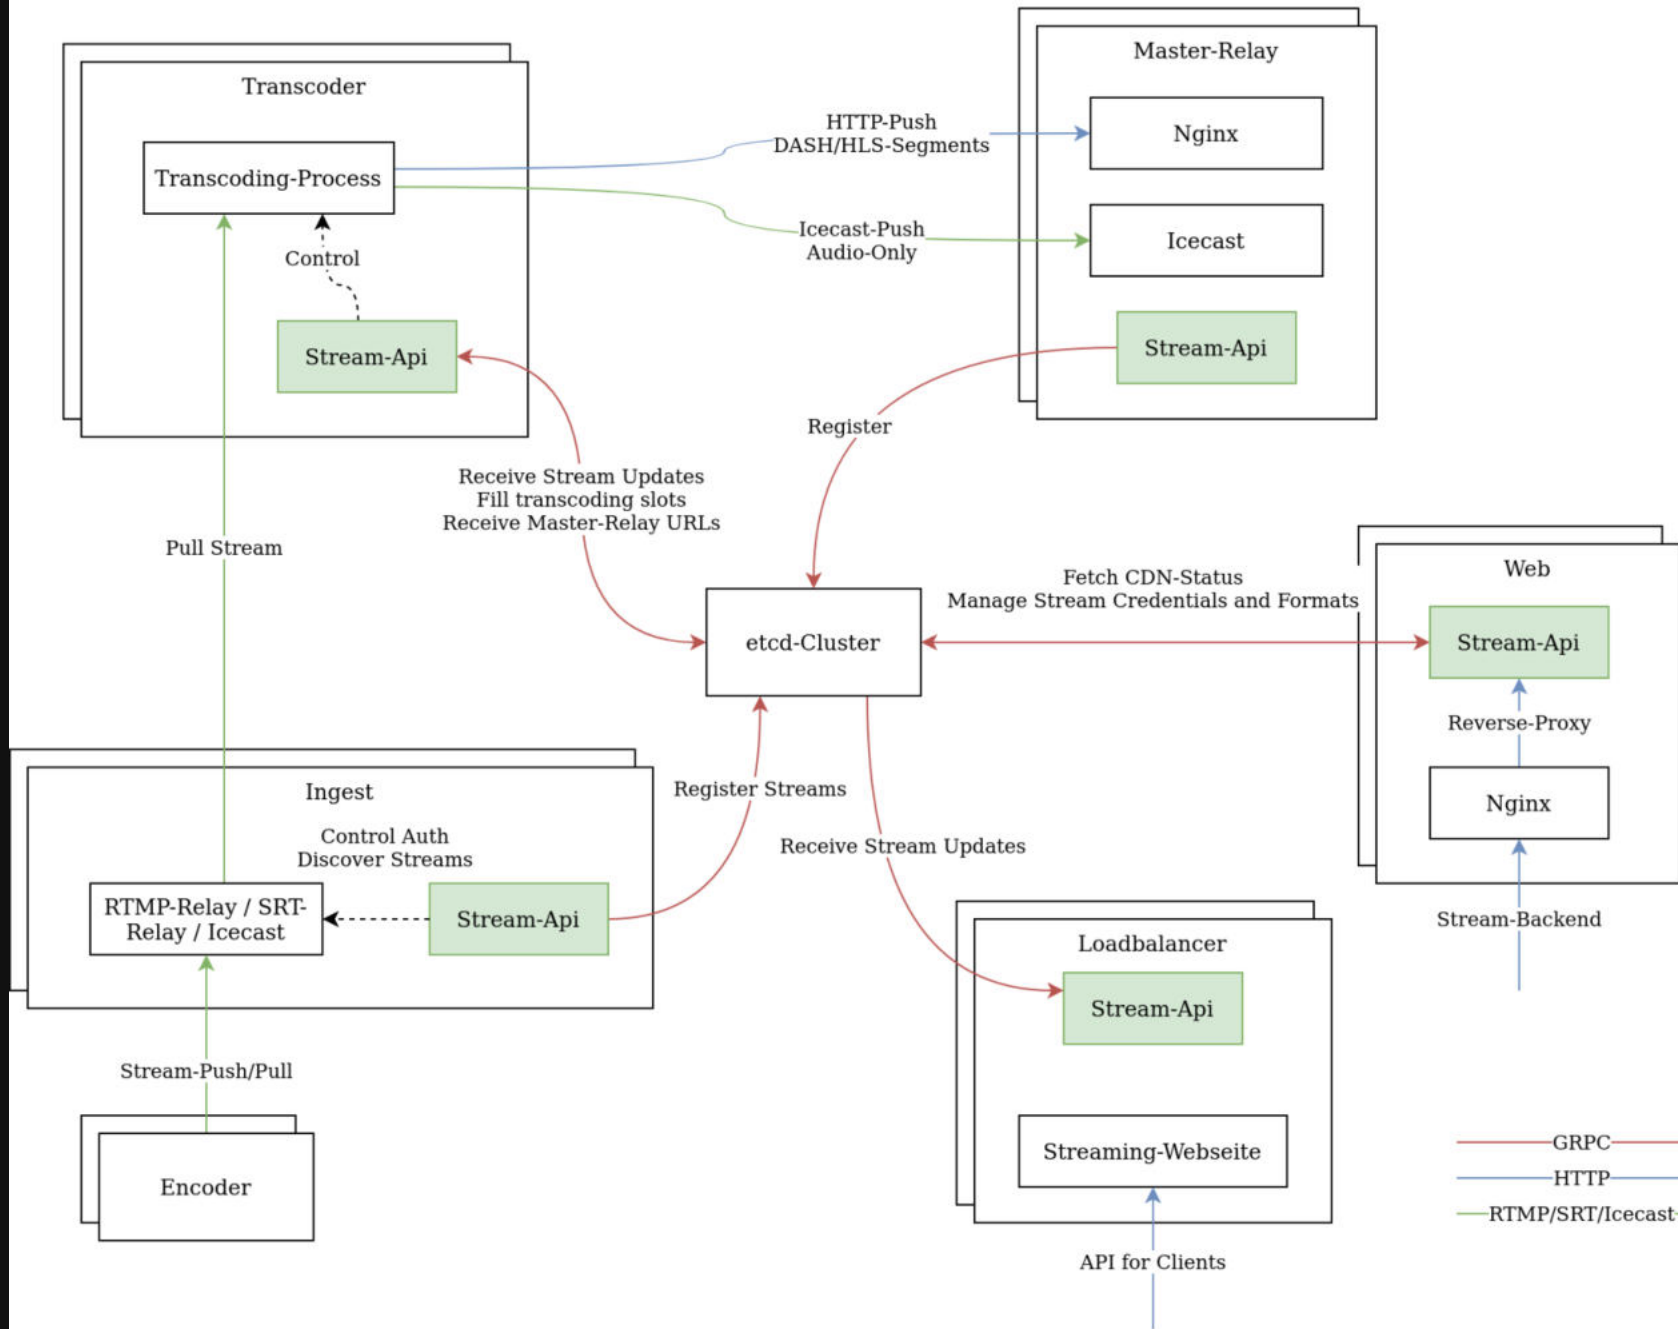

# C3VOC Infrastructure

## Stream Ingest changes

- RTMP is the de facto standard
- used servers with nginx-rtmp plugin
- added a custom authentication backend

<https://github.com/voc/rtmp-auth>

# Stream-Automation v2

# C3VOC Infrastructure

## Getting rid of RTMP

- RTMP is less than ideal
  - only supports one audio-stream
  - limited codec support
  - TCP-based

# C3VOC Infrastructure

## Getting rid of RTMP

- RTMP is less than ideal
  - only supports one audio-stream
  - limited codec support
  - TCP-based
- so we developed a SRT ingest solution

<https://github.com/voc/srtrelay>

# Future plans

- improve speaker audio/video quality
- make streaming easier for external parties Projects

# Projects

- translation muxing in the cloud
- plug&play capable RaspberryPi-based speaker video kit
- custom WebRTC conferencing app (Open Source Vmix Call) (<https://github.com/voc/kevin>)
- streaming automation and web-based streaming backend

# Conclusions

- Mumble Intercom worked great
- check your devices SDI specs
- don't decentralize too much too fast
- testing, testing, testing

# Thank you for your attention
